

GinnieNET Single Family Import File Layouts

Effective January 1, 2015

Notes on the new Single Family File Import Layout

As part of the GinnieNET enhancements in order to provide greater flexibility for additional data elements in the future, the import and export layouts have been changed.

Single-family Pool consists of the several Levels of Information and the new Import Layout has been structured as follows:

each Level of Information, i.e. Pool Level Information, Mortgage Level Information, etc., is represented by a **group of Physical Records** (i.e. actual records) **which is called a Logical Record**.

New format:

Physical Record length 80 bytes

Physical Record Type Indicator - 3 bytes (e.g. M16).

A Single-family Pool consists of the following Logical Records (groups of records):

1. The **Pool Logical Record (group of Pool records)** which contains physical records with record types of **P01, P02, P03, P04, P05, P06**;
 - 1.1. Totals Information is located in the records P03, P04, P05.
2. The **Mortgage Logical Record(s) (group(s) of Mortgage record(s))** which contains physical records with record types of **M01, M02, M03, M04, M05, M06, M07, M08, M10**;
 - 2.1. Primary Borrower Information is located in the physical record with record type M04;
 - 2.2. Co-borrowers Information is located in the physical record(s) with record types M05, M06, M07, M08 (physical records M05 - M08 would be omitted if there is no co-borrower);
 - 2.3. ARM data is located in the physical record with record type M10 - this data would not be present in a non-ARM loan.
3. The **Subscriber Logical Record(s) (group(s) of subscriber record(s))** which contains physical records with record types of **S01, S02**;
4. The **Master Agreement Logical Record(s) (group(s) of Master Agreement record(s))** which contains physical records with record type of **A01**;
5. The **Serial Notes Logical Record (group of Serial Notes record(s))** which contains physical records with record types of **N01 through N99** (this Logical Record will be present only for Serial Notes pool);
6. The **Builder Bond Logical Record (group of Builder Bond record(s))** which contains physical records with record types of **B01 through B26** (this Logical Record will be present only for Builder Bond pool);
7. The **Terminated Pools Logical Record(s) (group of Terminated Pool record(s))** which contains physical records with record types of **F01 through F99** (this Logical Record will be present only for Consolidation pool).

Each **Logical Record consists of multiple records** that are **80 bytes** in length.

Logical Records in Single-family pool will be expected in Pool, Mortgage, etc. order. Within each Logical Record (e.g. Pool, Mortgage, etc.), records will be in order, but not necessarily sequential.

A **Logical Record only needs to be present when it contains required information** - for example, Serial note

records are only included in serial note pools

Similarly, physical records inside the group only need to be present when they contain required information.

Changes since the prior version are specified at the end of the full set of record descriptions.
